

Technawi Penetration Testing Course

HW #1 : Bash Scripting

- 1) Write bash script to the following on “apache_logs.zip” file:
 - ➔ Extract unique visitors addresses.
 - ➔ Found who visited “robots.txt” file.
- 2) Write bash script to perform ping sweep in your kali linux subnet. Example: if your kali linux IP address is 10.0.2.4 and the subnet mask is 255.255.255.0, your script will do ping for all IPs on its range (10.0.2.4/24)?
